EXAMINER'S AMENDMENT

1. Applicant's election of claims 1-3 in paper No. 4 is acknowledged. Because Applicant did not distinctly and specifically point out the supposed error in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Applicant have the right to file a divisional application covering the subject matter of the non-elected claims 4-8.

The traversal is on the ground(s) that see the election paper. This is not found persuasive because the fields of search for method' and device claims are NOT coextensive and the determinations of patentability of method and device claims are different, that is process limitations and device limitations are given weight differently in determining the patentability of the claimed inventions. Also, the strategies for doing text searching of the device claims and method claims are different. Thus, separate searches are required.

The requirement is still deemed proper and is therefore made FINAL.

2. An examiner's amendment to the record appears below. Should the change and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Cancel claims 4-8.

Claim 1, line 6, "the conductive ink" should be —the conductive ink—

REASONS FOR ALLOWANCE

3. Claims 1-3 are allowed.

Art Unit: 2818

4. The following is an examiner's statement of reasons for allowance: None of the references of record teaches or suggests as cited in claim 1: An electrode substrate of a plasma display panel having an electrode pattern on a glass substrate, and being made by baking and removing a resin blinder component of a conductive pattern composed of a conductive ink, wherein the conductive pattern composed of the conductive ink is formed by printing the conductive ink on the glass substrate by an intaglio offset printing method; wherein the conductive ink is formed by dispersing or dissolving a metal powder and a resin blinder into a solvent; and wherein a printing blanket used for printing the conductive pattern has a rubber layer on a surface of the printing blanket and the rubber layer poses a volume increasing rate under 20% when the rubber is immersed in solvent of the conductive ink for 24 hours at 23 °C.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

CONCLUSION

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Asano et al (5,909,083): Process for Producing Plasma Display Panel.
